i want to lose weight,im 98kg male,give me a diet plan and training program to lose 10 kg, make sure that the food is from arab cuisine

Local LLM - 20:09:55

This is a comprehensive plan designed to help you lose **10 kg** safely and sustainably. Losing 10 kg from 98 kg is a significant goal; aiming for a loss of **0.5% to 1% of body weight per week** (roughly 0.5–1 kg per week) is the safest method to ensure you don't lose muscle or gain it back later.

Important Medical Disclaimer: I am an AI, not a doctor or nutritionist. Before starting any diet or exercise program, please consult with a healthcare professional, especially if you have underlying conditions like diabetes or hypertension.

Phase 1: The Nutrition Strategy (Arab Cuisine Adaptation)

To lose weight on an Arab diet, we do not remove food groups; we **optimize portions and cooking methods**.

The Golden Rules for Weight Loss:

- Portion Control:** Use your fist as a guide. Protein = 1 palm, Carbs = 1 cupped hand, Veggies = 2 hands.
- Reduce Refined Carbs:** Limit white bread (*Khobz*), white rice, and pasta. Switch to whole wheat bread or brown rice/couscous.
- Cooking Oil:** Arab cooking relies heavily on oil. Measure your olive oil (aim for 1 tablespoon max per meal). Avoid frying; choose grilling (*Shawarma/Kebab*) or baking.
- Sugar & Sweets:** Reduce dates, baklava, and sugary tea. Drink water, black coffee, or unsweetened green tea instead.
- Hydration:** Drink 3–4 liters of water daily. Often thirst is mistaken for hunger.

Phase 2: Sample Daily Meal Plan (Arabic Style)

This plan targets approximately **1800–2000 calories**, suitable for a male starting at 98kg to create a calorie deficit. Adjust portions based on your hunger levels.

Breakfast (The "Sahar" or Morning)

Option A: Oatmeal (*Al-Farshah*) cooked with water or skim milk, topped with cinnamon and a few walnuts/raisins. Add 1 egg boiled or poached.

Option B: Laban (Yogurt drink) + 2 eggs fried in little oil + cucumber salad.

Drink: Green tea or Black Coffee (no sugar).

Lunch (The Main Meal)

Protein: Grilled Chicken Breast, Lamb Kebab (lean meat), or Fish (*Mahshi*). Avoid the fat on top of the

kebab.

* **Carb:** 1/2 cup cooked brown rice OR a small portion of whole wheat bread.

* **Veggie/Fat:** Large bowl of mixed salad (Fattoush is excellent if you eat it without heavy dressing). Add 1 tbsp Hummus or Baba Ghanouj.

* **Drink:** Water or unsweetened mint tea.

****Afternoon Snack (Optional)****

* Choose **one**: A Greek Yogurt (*Labneh*), a small bowl of plain yogurt with mint, or a handful of almonds/walnuts (approx. 10-15 nuts).

****Dinner (Lighter Meal - Eat early)****

* **Protein:** Grilled fish, chicken skewers, or lentils (*Ful Medames*).

* **Veggie:** Roasted vegetables (Zucchini, eggplant, peppers) with little oil.

* **Carb:** Very small portion of whole wheat bread or skip carbs if you are very active earlier in the day.

* **Drink:** Warm water or herbal tea.

Phase 3: Training Program

To lose weight effectively, you need to combine strength training (to keep muscle mass high) with cardio (to burn extra calories).

Schedule: 4 days Strength, 2 days Cardio/Walking, 1 day Rest/Active Recovery.

****Day 1 & 4: Full Body Strength Training****

Focus: Compound movements to boost metabolism.

1. **Warm-up:** 5 mins brisk walk or jumping jacks.
2. **Squat (or Goblet Squat with a water jug):** 3 sets of 12 reps. (Use the kettlebell, backpack, or just bodyweight).
3. **Push-ups:** 3 sets of as many as possible (knee push-ups are fine to start).
4. **Overhead Press:** (Using dumbbells or water bottles) 3 sets of 12 reps.
5. **Rows (Bench Row):** Use a sturdy bench and pull with your bodyweight or resistance band. 3 sets of 12 reps.
6. **Plank:** Hold for 30–45 seconds, rest 10s, repeat 3 times.
7. **Cool-down:** Stretching (Hamstrings, Chest, Back).

****Day 2 & 5: Cardiovascular Training****

Focus: Fat burning.

* **Option A (Gym):** Treadmill incline walk (10-15% incline) for 30 minutes at a speed where you can talk but not sing.

* **Option B (Home):** Jumping jacks, high knees, and burpees circuit (Repeat 10 mins).

* **Option C (Outdoor):** Brisk walking or jogging in the park/garden for 45 minutes.

****Day 3 & 6: Active Recovery****

* Go for a long walk (90 minutes) after dinner if possible. This aids digestion and burns calories.

Day 7: Rest

* Do nothing strenuous. Focus on hydration and sleep.

Phase 4: Critical Lifestyle Tips

1. **Sleep:** Aim for 7–8 hours. Lack of sleep increases the hunger hormone (Ghrelin).
2. **The "Plate" Rule:** Before eating, fill half your plate with salad/vegetables (e.g., Fattoush or Cucumber/Tomato salad), a quarter with protein (Kebab/Fish), and a quarter with carbs (Rice/Bread).
3. **Avoid "Liquid Calories":** Stop drinking sugary sodas, sweetened juices, and heavy syrups (*Syrup tea*). One cup of syrup tea can be more than 200 calories.
4. **Date Consumption:** Dates are healthy but high in sugar. Limit to 1–2 per day max as a treat, not a staple snack.
5. **Consistency:** You will hit plateaus. This is normal. Do not stop eating protein.

Timeline Expectations

- * **Month 1:** You may lose 3–4 kg rapidly due to water weight and initial fat loss.
- * **Months 2–3:** Weight loss slows down to 0.5–0.7 kg per week. This is normal.
- * **Total Goal:** To lose 10 kg safely, this process typically takes **3 to 4 months**.

If you follow this plan strictly, focusing on whole foods like *Labneh, Hummus, Grilled Chicken, and Leafy Salads*, you will see significant results within the first month. Good luck
